

# JOBU miscellaneous

JOBU Plastics BV sells many plastic products for the horticultural sector. Some of them are so unique that we list them in this folder dedicated to JOBU miscellaneous products.

## JOBU moss pole ring

Makes it easy to secure several stems at the same time to a moss pole. The product has a clasp for heavy stems.

## JOBU hydrangea ring

The hydrangea ring is secured to a single cane and the branches are inserted into the ring that then keeps them in place. Cane diameter: 6.0 - 8.0 mm.

## JOBU rubber securing clip

The rubber securing clip is used for securing a stem/standard to a cane that supports it. Available in various lengths. The product stretches as the plant grows.

## JOBU grafting clamp

A small plastic clamp with a steel ring used for the grafting of cucurbits: cucumber, watermelon, melon, squash, courgette.

## JOBU plastic cane

Hollow plastic canes for supporting lightweight stems. Combine elegantly with the orchid ring.

## JOBU plant rings

Plant rings without curved extensions are used for securing plant stems to canes for support.

## JOBU super clip

For the quick securing of plant stems (example: hydrangea) to a cane as well as providing support during the vegetative phase of vegetable production.
