

# JOBU tagging ring

**The JOBU tagging rings: lets you see what you're doing!**

JOBU tagging rings are used to tag the crosses being made for seed production; a tagging ring of a different colour is used for each crossing period.

## JOBU tagging rings are secured as follows:

- 1. Coloured JOBU clip rings:**  
Squeeze the ring open, and encircle the flower stem with the ring.
- 2. Round ring with little flap:**  
hold it by the flap, and encircle the flower stem with the ring.
- 3. Small round ring with long flap:**  
hold it by the flap and encircle the stem with the ring.

With the right use of the tagging rings and an accurate recording system, the colour-coded tagging rings can be used to time the harvesting of the mature seeds/seed pods produced from a cross made during the same crossing period.

## JOBU tagging rings are used for:

- **vegetable seed production:** For the seed production of tomato, cucumber, sweet pepper, etc.
- **producing bedding plant seeds:** For tagging castrated flowers

**The JOBU tagging ring:  
it lets you see what you've done!**

Standard colours: red, white, blue, orange, purple, pink, yellow
